Subject: Misc Issues

Sensitivity: Confidential

Hans,

The study appears to be going well. We haven't lost any participants out of the 100 that were randomized. As Bettie or Candace may have told you, we had a small issue with the timing of the post lunch topography measurements. That has now been resolved and the measurements this afternoon appeared to be conducted correctly when Candace and I observed them at noon today.

There are a few other issues that I wanted to check on:

1. Contract for the current study - did you get that signed yet? My finance people are starting to get a bit nervous about this.
2. List of qualifying cigarettes for the long term Accord study. If possible, we would like to get this by Wednesday or it will start to negatively impact our recruting for this study.
3. Some of the markers samples that were going to be sent to Covance for analysis - should we only forward the samples from the people that were actually randomized or all of the ones who checked in?
4. Currently, the smoking history questionaire requires a witness. Is there a specific reason for this?

I look forward to speaking with you later this week.
